Pune · A note for our postgraduates

Career Plus

The same MDS. A pathway you can point to.

We want the next three years to build more than a specialty title. Career Plus is our commitment to your path after MDS — a counted, supervised track that runs beside the curriculum. It is how we intend to stand behind your future.

01

From diagnosis to the next step.

Two hundred CBCT reports. Thirty implant plans. Thirty laser procedures.

02

Two clinical workflows of your own.

Twenty implant placements. Twenty microscope procedures. From Year 2.

03

Mucosa, oncology, and a wider door.

Twenty-five OPMD files. Tobacco and areca in the consult.

Included in training for OMDR and Oral Pathology.

An elective for every other MDS specialty.

Programme Note: The case and procedure numbers indicated under Career Plus represent the planned training exposure across the programme. Individual cases and procedures will be assigned by faculty based on student merit, demonstrated competency, case complexity, patient suitability, clinical requirements and faculty guidance. All clinical exposure will remain subject to applicable academic, ethical and statutory requirements.

Seven parts. One pathway.

A counted log. Faculty beside you. What follows is the future we are trying to open — not a post we can promise.

01

Advanced CBCT & AI-assisted imaging

200 supervised reports

So you can sit with a scan and write a report another clinician will trust.

02

Digital implant planning

30 planned cases

So the scan becomes a plan a surgeon or prosthodontist can take forward.

03

Laser dentistry & soft-tissue management

30 procedures

So diagnosis does not end at the notes. Work you can stand behind.

04

Clinical oral oncology, OPMD & diagnosis

25 cases, tobacco and areca in the consult

So a suspicious mucosa has a complete file — the one cancer centres, cessation programmes and public-sector desks ask to see.

05

Clinical implant placement

20 placements, from Year 2

So a small practice, if that is your path, includes the surgery and not only the referral.

06

Microsurgery under the operating microscope

20 procedures, from Year 2

So endodontics, biopsy and soft tissue under the microscope are work you have done, not only watched.

07

Entrepreneurship & diagnostic practice

One complete plan, presented

So the first six modules can live in a practice that has been thought through, with the BBA school beside you.

Our word to you

Career Plus will make you employable. Not a promised post — a longer career. You will know how to be more than a diagnostician for the colleagues who need you, how to work in public health for the nation's PSUs, and how to plan the finance and the running of a clinic. Three skill sets. A meaningful working life.

Programme Note: The case and procedure numbers indicated under Career Plus represent the planned training exposure across the programme. Individual cases and procedures will be assigned by faculty based on student merit, demonstrated competency, case complexity, patient suitability, clinical requirements and faculty guidance. All clinical exposure will remain subject to applicable academic, ethical and statutory requirements.
